

Automated fuel & CO2 savings - up to 15 % !

Frugal Propulsion®

An automated, on-top system reducing fuel by optimizing RPM and pitch. Powered by artificial intelligence for continuous real time optimization across all vessel conditions.

2 phased turn-key solution and investment

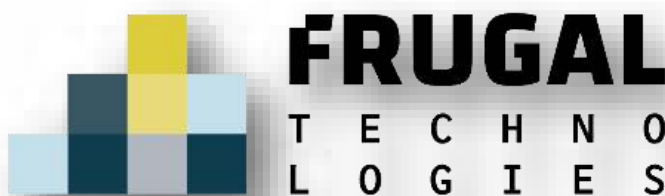

Phase 1: Fuel optimization and CO2 reduction (limited investment)

Phase 2: VFD installation (optional) (variable frequency device)

All safety systems on vessel is maintained

Key Benefits

- ✓ **Guaranteed** 10 % savings
- ✓ ROI of 6-months
- ✓ Ease of use controls on the bridge
- “autopilot” /thrust feature
- ✓ Preventive maintenance overview
- ✓ 1 day Installation on pier

The words of the customer...

Royal arctic Line

“We have had a significant improved performance and we help protect the sensitive arctic waters. With a paypack of 10-12 months the investment is attractive – and we are in a dialogue with Frugal about launching at additional vessels”

Anders Bay Larsen
Senior Director,
Fleet Management
